Press Release

Town of Ballston Starts Ballston Lake Sewer Project

Selects Adirondack Mountain Engineering to Design Project

Ballston Lake, NY - April 21, 2017

The Town of Ballston has begun engineering the “Ballston Lake Sewer Project” a major 10.6 million dollar project that will assist in protecting the water quality of Ballston Lake which is currently listed as an impaired water body with the New York Department of Environmental Conservation. Approximately 700 parcels of land located adjacent to the lake, along Main Street and within Buell Heights will be provided sewer infrastructure as a result of this project. This project has been made possible through financial assistance from the New York State Clean Water State Revolving Fund. The Town of Ballston received both a short term finance loan (\$7.65 million) and a New York State water grant (\$2.55 million).

The town has entered into a contract with Adirondack Mountain Engineering to design and monitor construction of this system. The “engineering phase” is expected to last about a year and be completed in the Spring of 2018. Residents can expect to see surveyors in the near future and should look for correspondence from the town introducing the project and soliciting information as to where to locate the sewer connection on each property. Construction of the system is expected to start in 2018 and is expected to be completed in 2019. More information regarding this project can be found at the project’s web site: www.ballstonsewers.org or by emailing questions to sewers@townofballstonny.org.
